

# Vaibhav Gupta

Vellore, Tamil Nadu, India | bibhu.2005ssj@gmail.com | +91-8527889187 | LinkedIn | GitHub

## Experience

- |                                                                                                                                                                                                                                                                                                                                                  |                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Technology Analyst Intern</b> – Citicorp                                                                                                                                                                                                                                                                                                      | June – July 2026 |
| <ul style="list-style-type: none"><li>Built Tableau API-based delivery pipelines with one-click Hyper file generation, cutting manual report turnaround and scaling across 10+ Oracle tables</li><li>Engineered a Jira analytics pipeline surfacing 7000+ tickets in a single view, streamlining request status tracking and reporting</li></ul> |                  |
| <b>Space Tech Entrepreneur Intern</b> – India Space Lab                                                                                                                                                                                                                                                                                          | June – July 2025 |
| <ul style="list-style-type: none"><li>Completed 45-day intensive training in drone technology, satellite systems, rocketry, and space astronomy applications</li><li>Built an autonomous mission control system on ESP32 with real-time telemetry using embedded C for IoT applications</li></ul>                                                |                  |

## Education

- |                                                                                           |             |
|-------------------------------------------------------------------------------------------|-------------|
| <b>Vellore Institute of Technology</b> , B.Tech in Computer Science (IoT) – CGPA: 9.36/10 | 2023 – 2027 |
| <b>Indian Institute of Technology, Madras</b> , BS in Data Science – CGPA: 8.6/10         | 2023 – 2027 |
| <b>Air Force Golden Jubilee Institute</b> , High School Diploma (Engineering)             | 2020 – 2023 |
| 12th Grade: 94.0%   10th Grade: 95.8%                                                     |             |

## Projects

- |                                                                                                                                                                                                                                                                                                                 |                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Autonomous Mission Control System for Small Satellite Operations</b>                                                                                                                                                                                                                                         | Jun – Jul 2025 |
| <ul style="list-style-type: none"><li>Developed IoT-based mission control system simulating complete CanSat operations with DHT22 sensors and real-time telemetry</li><li>Implemented automated mission phase management with emergency abort capabilities and continuous atmospheric data logging</li></ul>    |                |
| <b>Dish Dynamics – VIT Mess Manager</b>                                                                                                                                                                                                                                                                         | Feb – Apr 2025 |
| <ul style="list-style-type: none"><li>Full-stack web app for mess operations with food preference tracking, waste analytics, and efficiency improvements</li><li>Tech: React, Flask, MongoDB, HTML/CSS/JS</li></ul>                                                                                             |                |
| <b>Taste &amp; Trails Korea – AI-Powered Local Guide System</b>                                                                                                                                                                                                                                                 | Dec 2025       |
| <ul style="list-style-type: none"><li>Built a culturally-aware AI travel assistant using steering documents to drive system logic and authentic local recommendations</li><li>Built a production-grade Flask backend with MongoDB Atlas, multi-API orchestration, and serverless deployment on Vercel</li></ul> |                |

## Technical Skills

**Languages:** Python, C/C++ , Java  
**Embedded & IoT:** ESP32, Arduino, IoT Sensors, Embedded C  
**Data & ML:** SQL, Data Analytics, Data Engineering, NLP, Tableau  
**Web & Backend:** HTML, CSS, JavaScript, Flask, FastAPI, Vue.js  
**Cloud & Tools:** Microsoft Azure, AWS, Wokwi, SolidWorks

## Certifications

- |                                               |          |
|-----------------------------------------------|----------|
| AWS Certified Solutions Architect – Associate | May 2026 |
| Google Cybersecurity Professional Certificate | Feb 2026 |
| Machine Learning Specialization (Coursera)    | Mar 2025 |
| CS50x (Harvard)                               | Dec 2024 |
| Azure Data Scientist Associate (Microsoft)    | Jun 2024 |
